

HOW TO MAKE THE BIRD FEEDER

This feeder uses three different kinds of lines: solid, dotted and dashed. The **SOLID** lines show you where to cut the birdfeeder. The **DOTTED** lines are outward folds or folds that will be made away from you. You will be able to see them on the outside of the crease once you make the fold. The **DASHED** lines are inward folds or folds that will be made toward you. That means these fold lines will be on the inside of a crease and you will not be able to see them once the fold is made.

All the fold lines are numbered in the order you should make your folds.
